

Pushing the limits of time-frequency uncertainty in the detection of transient communication signals in weakly electric fish

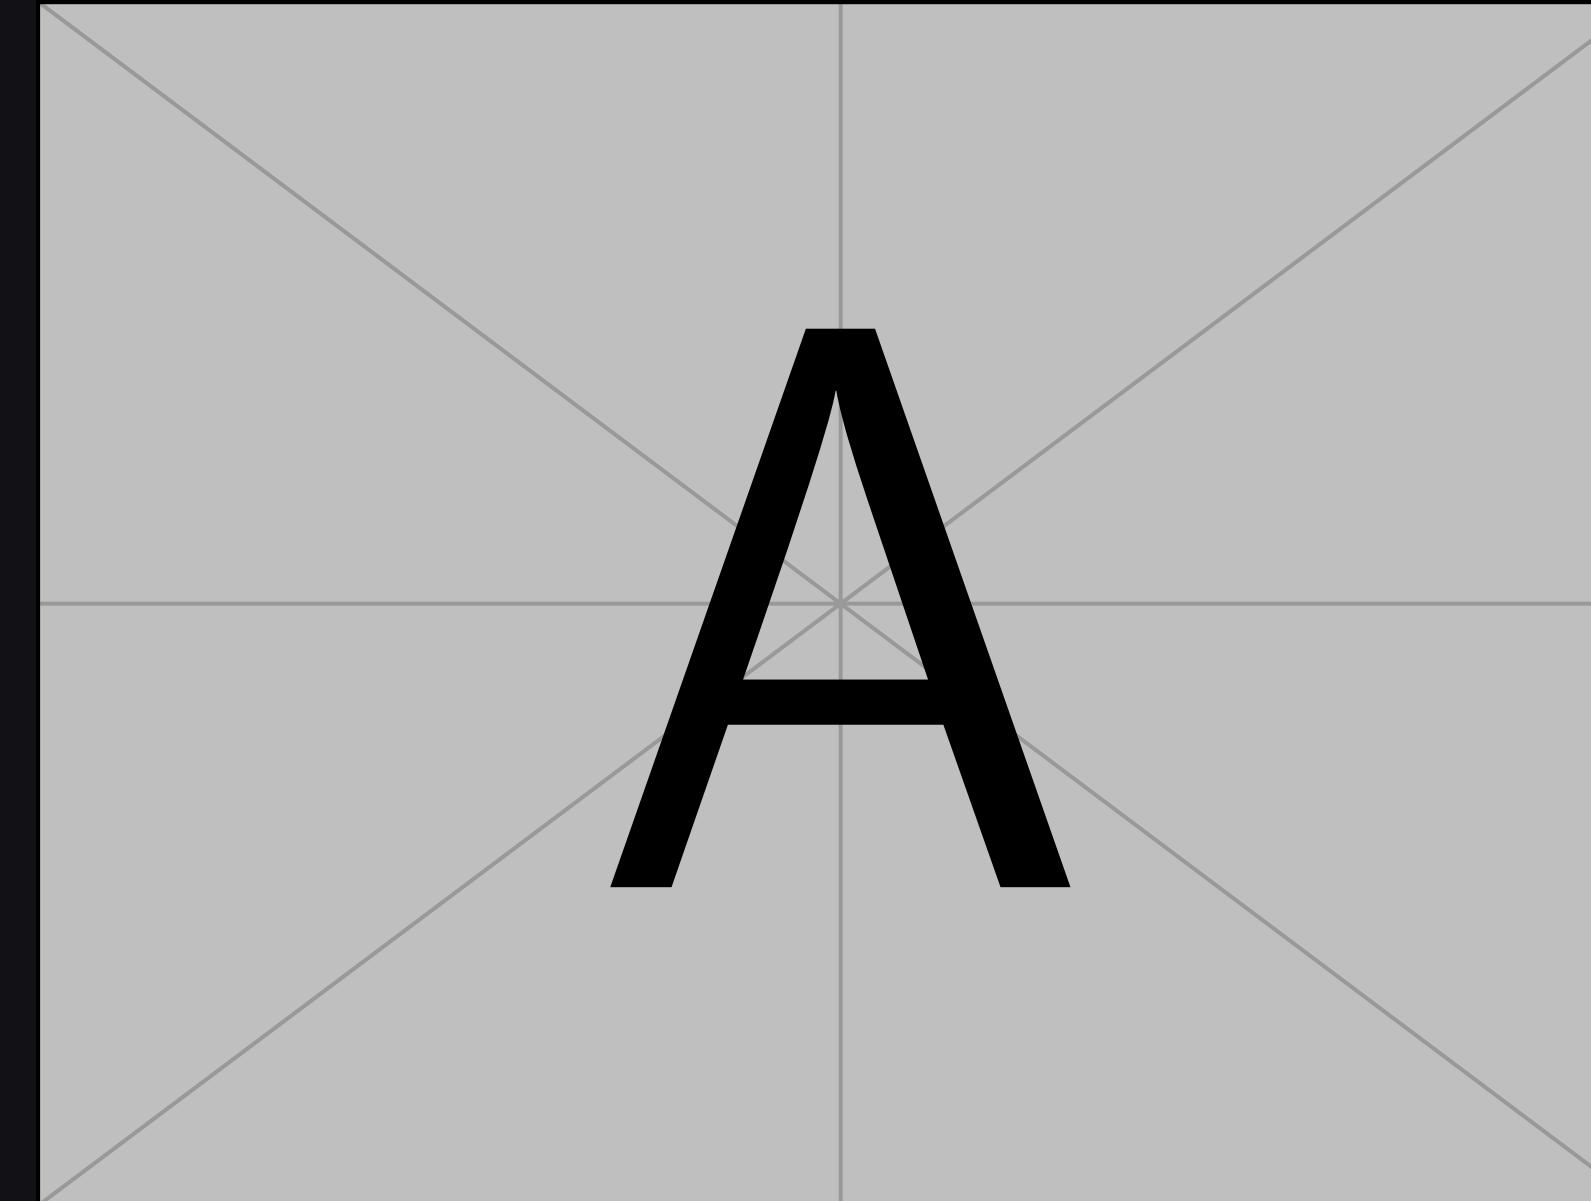

Sina Prause, Alexander Wendt, Patrick Weygoldt

Supervised by Till Raab & Jan Benda, Neuroethology Group, University of Tübingen

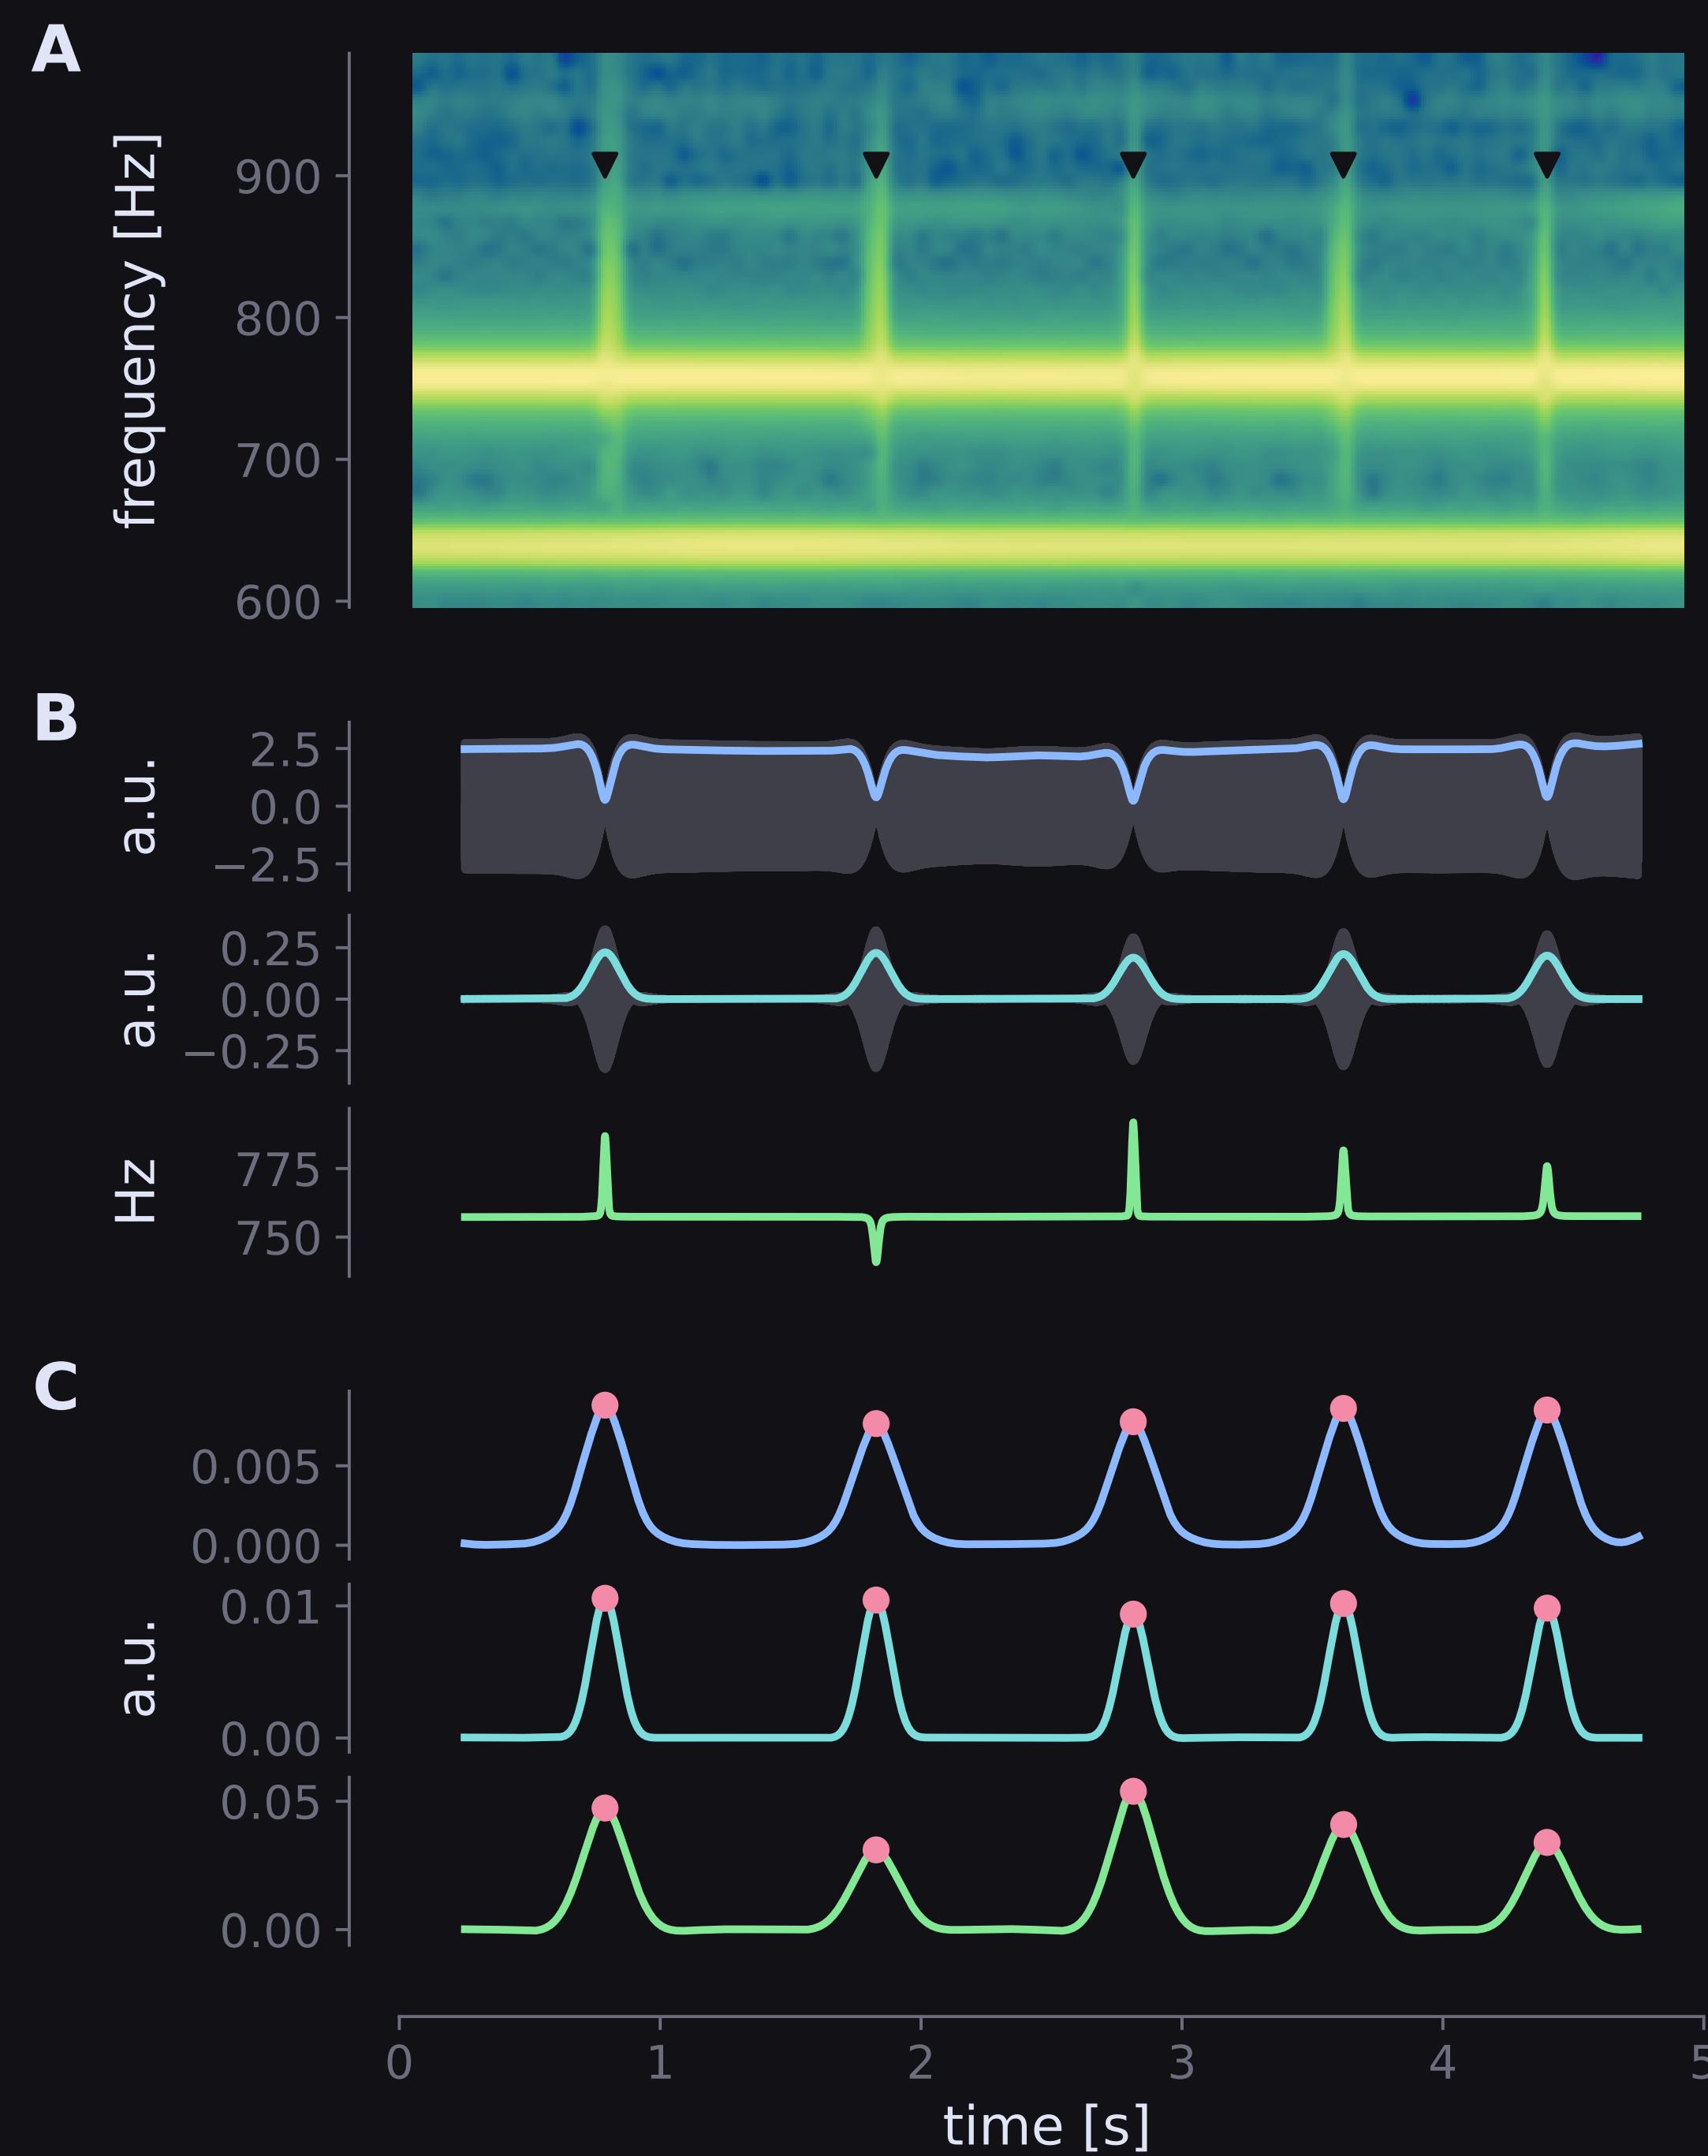

Introduction

The time-frequency tradeoff makes reliable signal detection and simultaneous sender identification of freely interacting individuals impossible. This profoundly limits our current understanding of chirps to experiments with single - or physically separated - individuals.

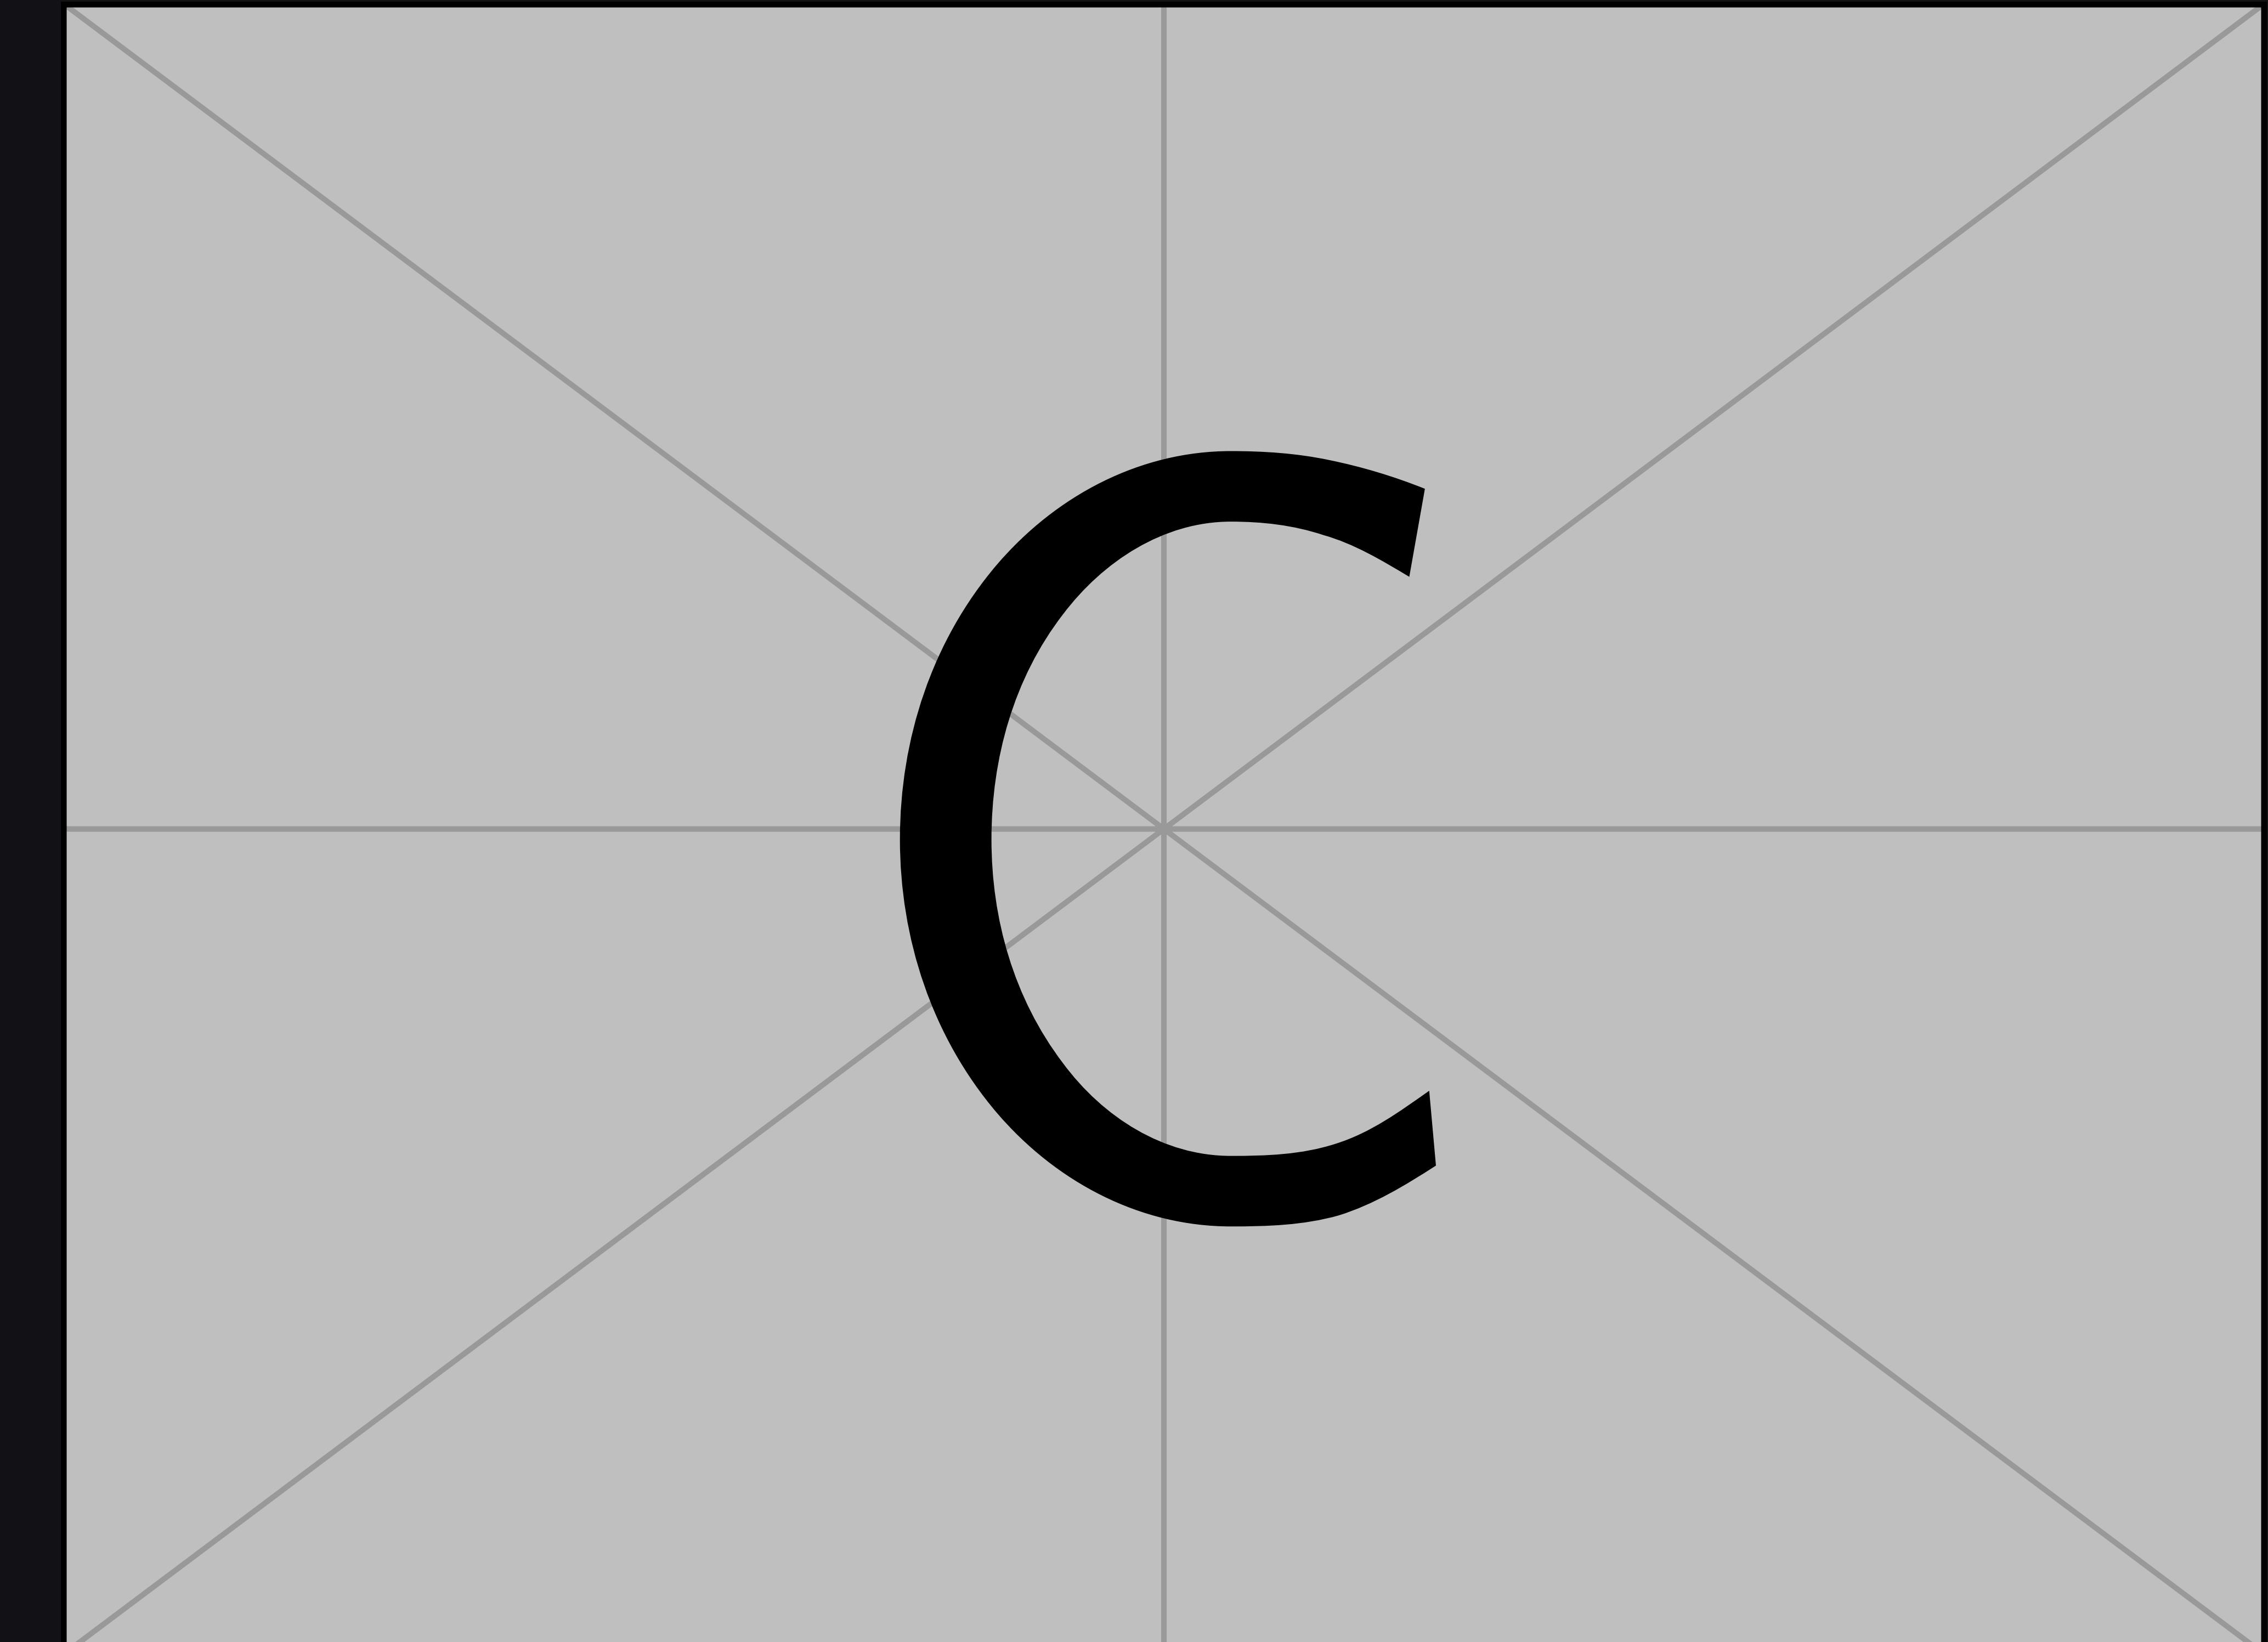

A chirp detection algorithm
